- Communicated effectively with backend devs and integrated their endpoints perfectly.

LEADERSHIP EXPERIENCE

Techgix

Co-Founder

Developed and co-founded [Techgix](#), a tech blog and community that teaches and empowers techies through Twitter spaces, Google meets, tech articles etc.

PROJECTS

Node Logger (Open Source): link [here](#)

While working with Blockroll, For the first time I really needed to see all API requests my server received. To save time, we used a third party software. However, when I became free , I built an NPM package that allows me to see my logs .

Sendmail: link [here](#)

When building my portfolio, I realized I needed a third party to help me send the data on my contact form to my email. I tried creating one with SendGrid but they didn't send me an OTP code. SO, I built an Open source Node server that allows you to send unprofessional emails for free. It is currently being used by over 30 devs on their portfolio and hackathons to send quick mails.

Techgix: link [here](#)

A tech blog where I and my friends share everything we learn with our amazing community.

Ivara: link [here](#)

Built the website for U.k based tech agency

EDUCATION

BSC Software Engineering - Miva University
